

Sounday

Your calendar, turned into a personal soundtrack.

ONE-PAGE OVERVIEW

Sounday reads your calendar, scores each day's **stress load**, and generates a **mood-matched track** for the moment — calm music to wind down on overloaded days, a confidence-priming hype song before high-stakes meetings — then pings it to your phone **right when you need it**.

HOW IT WORKS

1

Read & score

We turn your week into a 0–100 stress curve from meeting count, hours, back-to-back gaps, early starts and pressure keywords, and flag high-stakes meetings automatically.

2

Generate

The day's load sets the acoustics (tempo, energy, surprise); the meeting sets the lyrics — context-aware affirmations enriched with public company facts.

3

Deliver

Your track is scheduled to your phone on a prep cadence — the night before, the morning of, and 15 minutes before — so it lands exactly when it helps.

TWO MODES, ONE ENGINE

Wind-down

For overloaded days. Slower, softer, more predictable audio that brings arousal down before you burn out.

low tempo · low energy · high-uncertainty / low-surprise

Prime

Before high-stakes moments. Bright, driving, anthemic lift with affirmation lyrics drawn from the meeting.

high tempo · high energy · low-uncertainty / high-surprise

GROUNDING IN THE SCIENCE

- **Uncertainty × surprise.** Musical pleasure peaks at low-uncertainty/high-surprise or high-uncertainty/low-surprise (Cheung et al., 2019). Our engine targets each profile by mode.
- **Situation-aware delivery.** Affective music preference follows daily, situational rhythms (Park et al., 2019; Juslin & Västfjäll, 2008).
- **Anticipatory reward.** Dopamine is released in anticipation of peak musical moments (Salimpoor et al., 2011) — the mechanism a hype track uses to prime you.
- **Calmer under pressure.** Music before a stressor shapes the stress response and autonomic recovery (Thoma et al., 2013).

WHO IT'S FOR

Client-facing professionals with packed calendars — and neurodivergent minds.

People in high-stakes, back-to-back B2B roles feel calendar overload most acutely. For **ADHD and other neurodivergent users**, the right auditory stimulation can lift under-aroused attention systems (Moderate Brain Arousal model; Söderlund et al., 2007), so Sounday is built to manage **energy, not just time**.

WHAT'S LIVE TODAY

Calendar stress scoring

High-stakes detection

AI music + context-aware lyrics

Company enrichment

Voice input

SMS prep reminders

Waitlist & €1 Prime unlock

On the roadmap: before/after mood check-ins, closed-loop adaptation that tunes the next track to your response, and optional heart-rate input (Web Bluetooth on Android; manual entry elsewhere).
