

Sounday — Deploy to Render

[SETUP GUIDE](#)

Get the app live on an always-on link (auto-deploys on every push).

The app is on GitHub at [hodoea/sounday](#) with a Render blueprint already committed. Follow these four steps to put it live. Whoever connects GitHub to Render just needs access to that repo — it can be either of us. Total time ~5 minutes.

1 Merge the pull request

All the code currently lives in PR #1; `main` is still empty. Merge it so Render has something to deploy and future changes follow the normal flow.

Open [github.com/hodoea/sounday/pull/1](#) → click **Merge pull request** → **Confirm merge**.

2 Create the Render service

1. Go to [dashboard.render.com](#) → **New** → **Blueprint**.
2. Connect GitHub (choose **Only select repositories** → grant access to just [hodoea/sounday](#)).
3. Pick the [hodoea/sounday](#) repo, branch `main`. Render reads `render.yaml` and proposes a free web service named **sounday** → click **Apply**.

3 Add the API keys (Render → service → Environment)

Paste each key below, then **Save** (this triggers the deploy). `DATABASE_URL` and the Node version are set automatically by the blueprint.

VARIABLE	VALUE
ELEVENLABS_API_KEY	sk_0caa820133b40ce36dd9bf503fba7528d58a6749e444299b
CALA_API_KEY	cLsk_KIV7uIKBEuFraxz-pFsg9stx-Y_HfjNIUN6Fsg3ts_U
VAPI_PUBLIC_KEY	4d3b9e4c-369e-4689-adad-f5509d46749d
VAPI_PRIVATE_KEY	b0445d06-6c00-4fcf-a534-4e0b2f326f35
SPOTIFY_CLIENT_ID	8bd461f1fd6c473cb75eda069366d14e
SPOTIFY_CLIENT_SECRET	931316b9c28b435ebc7f63678a92d1d5
GOOGLE_CLIENT_ID	1038272302524-sbc856d6qt9gqh6t16v7tui7ttttoib5.apps.googleusercontent.com
GOOGLE_CLIENT_SECRET	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

4 Point Google OAuth at the live URL

After the first deploy you'll get a stable URL like [https://sounday.onrender.com](#). In **Google Cloud Console** → **your OAuth client** → **Authorized redirect URIs**, add:

[https://<your-render-url>/api/google/callback](#)

Then under **OAuth consent screen** → **Test users**, add any email that should be able to connect (the app is in "testing" mode, so only listed testers can sign in). Done — every push to `main` now auto-deploys.

Keep these keys private. This document contains live API keys — share it only with your co-founder, not publicly. Rotate the ElevenLabs, Vapi private, Spotify secret and Google secret after the hackathon. Note: Render's free tier sleeps after ~15 min idle (first visit wakes it in ~30–60s); the \$7/mo plan removes this.
