

Sounday connects to your calendar (or you add an event yourself), scores how stressful each day is, and **generates an original track tuned to the specific meeting you're walking into** — calm music to bring you down on overloaded days, a confidence-priming hype song before high-stakes moments. It checks how you feel before and after, re-tunes the music to move you toward a better state, and pings the track to your phone **right when you need it**.

WHAT THE TOOL ACTUALLY DOES

1

Reads & scores your week

Syncs Google Calendar (or add an event by hand — no account needed). It scores each day 0–100 from meeting count, hours, back-to-back gaps, early starts and pressure keywords, and auto-flags high-stakes meetings (external attendee, keywords like "pitch", or >60 min).

2

Generates a track for the event

You pick one of five modes (it pre-selects one). The acoustics come from **both the day's load and the specific meeting** — a 2pm board pitch sounds heavier than a quick 1:1. A "how do you feel?" check-in fine-tunes further; Intense adds sung affirmations from the meeting (and asks for context if it's missing).

3

Delivers & learns

The track is scheduled to your phone by SMS on a prep cadence — night before, morning of, 15 min before. After it plays, Sounday asks how you feel now, shows the shift, and offers a one-tap re-tune.

FIVE MODES — ONE ENGINE, TUNED TO THE MOMENT

● Intense Grounding & priming

Steady, confident lift before high-stakes meetings. The only mode with sung affirmations.

~102 BPM · high energy

● Focused Deep-work flow

Low-distraction, hypnotic and predictable for heads-down work. Instrumental.

~83 BPM · low energy

● Social Bright & open

Upbeat and positive to carry you between people and rooms. Instrumental.

~119 BPM · high energy

● Light Spacious & easy

Unhurried recovery to wind down on overloaded days before you burn out. Instrumental.

~65 BPM · low energy

● Creative Textured & curious

Evolving, playful motifs to keep ideas moving and loose. Instrumental.

~93 BPM · mid energy

GROUNDING IN THE SCIENCE

- **Uncertainty × surprise.** Musical pleasure peaks at low-uncertainty/high-surprise or high-uncertainty/low-surprise (Cheung et al., 2019). Our engine targets each profile by mode.
- **Situation-aware delivery.** Affective music preference follows daily, situational rhythms (Park et al., 2019; Juslin & Västfjäll, 2008).
- **Anticipatory reward.** Dopamine is released in anticipation of peak musical moments (Salimpoor et al., 2011) — the mechanism a hype track uses to prime you.
- **Calmer under pressure.** Music before a stressor shapes the stress response and autonomic recovery (Thoma et al., 2013).

WHO IT'S FOR & WHAT'S LIVE

Client-facing professionals with packed calendars — and neurodivergent minds.

Founders, salespeople and execs in high-stakes, back-to-back roles feel calendar overload most acutely. For **ADHD and other neurodivergent users**, the right auditory stimulation can lift under-aroused attention systems (Moderate Brain Arousal model; Söderlund et al., 2007). Sounday manages **energy, not just time**.
